

2016

REPORT OF PROGRAM OUTCOMES

Each calendar year, the KCI Cancer Committee at McLaren Flint develops and disseminates a report of patient or program outcomes to the public. For the year 2016, the Cancer Committee reported outcomes on the following three standards:

- ◆ Standard 4.1 Prevention Programs
- ◆ Standard 4.2 Screening Programs
- ◆ Standard 4.4 Accountability Measures
- ◆ Standard 4.5 Quality Improvement Measures

◆ Standard 4.1 Prevention Programs

Tobacco/Smoking Cessation Workshops

A certified tobacco-treatment specialist at McLaren Flint offers two smoking cessation workshops each month at the Cancer Institute. In addition, individual counseling sessions and group workplace

presentations are also available at no cost to the Flint-area community. The number of workshops, classes and presentations are dependent on the level of public interest. In 2016, no

workshops were held at the Cancer Institute, 15 individual counseling sessions were conducted, and one tobacco/smoking cessation presentation was given at a local business.

◆ Standard 4.2 Screening Programs

Colorectal Cancer Screening Event

During the month of March, McLaren Flint conducted a public service campaign to encourage members of the community - that fall within the screening guidelines - to request a free Fecal Immunochemical (FIT) test. Radio and

print messaging ran during the month. Fifty-seven kits were distributed. Twenty-seven of the tests were completed and returned for processing. All individuals with negative results received a letter from a registered nurse. The three individuals whose results were positive were contacted directly by a registered nurse and encouraged to receive follow-up testing and treatment.

Breast Cancer Screening Event

On August 23 and August 30, 2016, McLaren Flint in conjunction with the Food Bank of Eastern

Michigan held a breast cancer screening event at the McLaren Imaging Center.

A total of 22 women received mammograms. Exit interviews were conducted at the

completion of the mammogram and participants were given 12 pounds of food from the Food Bank of Eastern Michigan.

Lung Cancer Screening Services

The Comprehensive Lung Cancer Detection Program through McLaren Flint provides access to advanced diagnostics and care for individuals at an increased risk of lung cancer by a team of medical experts in the management of lung disease and the treatment of cancer. The Comprehensive Lung Screening Program is accredited by the American College of Radiology (ACR) and includes:

Initial consultation to determine eligibility for lung screening, a lung scan performed on a 128-slice CT by certified CT technologists, access to physician specialists if the scan identifies lesions, and a multidisciplinary conference to review diagnosis and collectively form a recommended best course of treatment.

From January 1 through October 31, 2016, 485 qualifying individuals received the lung scan. Forty-seven of these patients' scan results revealed lesions and they were referred for further care and the additional services of the Program.

Standard 4.4 Accountability Measures and 4.5 Quality Improvement Measures

Cancer Program Practice Profile Reports (CP3R)

The Cancer Committee ensures and monitors that patients treated at McLaren Flint receive care according to nationally-accepted measures. The

Commission on Cancer measures compliance with current CoC quality reporting tools - the Cancer Program Practice Profile Reports. Below is a summary CP3R performance grid

that reports 2014 breast cancer cases treated at McLaren Flint. We are proud that our program is exceeding all required performance expectations of the Commission on Cancer.

ACOS NCDB CP3R 2014 Measures

The ACoS Commission on Cancer has defined four Cancer Program Practice Profile Reports (CP3R) for Breast Cancer

ONCOLOGY METRIC	McLAREN FLINT	BENCHMARK
Radiation therapy is administered within one year (365 days) for women under age of 70 receiving breast conserving surgery for breast cancer (BCSRT)	100% (65/65 patients)	90%
Tamoxifen or third generation aromatase inhibitor is recommended or administered within 1 year (365 days) of diagnosis for women with AJCC T1c or stage IB-III hormone receptor positive breast cancer (HT)	93.60% (59/63 patients)	90%
Radiation therapy is recommended or administered following any mastectomy within 1 year (365 days) of diagnosis of breast cancer for women with ≥ 4 positive regional lymph nodes (MASTRT)	100% (7/7 patients)	90%
Image or palpation-guided needle biopsy to the primary site is performed to establish diagnosis of breast cancer (nBx)	91.80% (67/73 patients)	80%

Conclusion

Residents of Genesee, Lapeer and Shiawassee Counties have several resources available through the Karmanos Cancer Institute at McLaren Flint to help in the prevention and early diagnosis of cancer. Those diagnosed with cancer have treatment options available in their county that meet and/or exceed the performance expectations set forth by the Commission on Cancer.

The Commission on Cancer (CoC) is a consortium of professional organizations dedicated to improving survival and quality of life for cancer patients through standard-setting, prevention, research, education, and the monitoring of comprehensive quality care.
