Adrenal Crisis

Purpose: This protocol is intended for the management of patients with a known history of adrenal insufficiency, experiencing signs of crisis.

Indications:
1. Patient has a known history of adrenal insufficiency or Addison's disease.
2. Presents with signs and symptoms of adrenal crisis including:
   a. Pallor, headache, weakness, dizziness, nausea and vomiting, hypotension, hypoglycemia, heart failure, decreased mental status, or abdominal pain.

Treatment:
1. Follow General Pre-hospital Care Protocol.

Post-Medical Control
2. Administer fluid bolus NS.
3. Assist with administration of patient's own hydrocortisone sodium succinate (Solu-Cortef)
   a. Adult: 100 mg IV
   b. Pediatric: 1-2 mg/kg IV

OR
4. Per MCA Selection, administer Prednisone OR Methylprednisolone

<table>
<thead>
<tr>
<th>Medication Options:</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] Prednisone - 50 mg tablet PO (ages 6 and up)</td>
</tr>
<tr>
<td>[x] Methylprednisolone - Adults 125 mg IV or</td>
</tr>
<tr>
<td>[ ] Pediatrics 2 mg/kg IV</td>
</tr>
</tbody>
</table>

5. For MCA with both selected, Prednisone PO is the preferred medication. Methylprednisolone is secondary and reserved for when a patient can't take a PO medication.

6. Transport
7. Notify Medical Control of patient's medical history.
8. Refer to Altered Mental Status Protocol.
