MRI/MRA Tasks and Screening Form

The workflow for an inpatient MRI is for the nurse to complete the MRI Screening Form via the task that fires based on placement of an order for MRI/MRA. In the investigation of this process, it was found some orders did not have the task associated, or that some roles did not have the task assigned to their task lists. To correct this oversight all MRI/MRA orders have had the task associated to them. Additionally, the tasks have been added to all inpatient nursing roles. These tasks will appear as follows:

CareCompass:

The screenshot shows the CareCompass interface with a task list. The 'Current' section highlights the task: 'MRI Abdomen w/o Contrast MRI Screening Form 03/29/19 13:42:00 EDT, Routine, Reason: Abdominal aortic aneurysm (AAA), known, Trans...'. Below it, the 'Unscheduled' section lists medication orders: 'diltiazem (Cardizem) Infusion Billing 21.25 mg = 4.25 mL, IV Push, Injection, Once, First Dose: 03/20/19 11:00:00 EDT, Stop Date: 03/20/19...', 'diltiazem 125 mg [5 mg/hr] + Sodium Chloride 0.9% 100 mL (diltiazem IV additive 125 mg [5 mg/hr] + sodium chloride 0.9% titrate 100 mL)', and 'morphine Infusion Billing 2 mg, IV Push, Injection, Q3H, PRN pain, moderate (4-6 on pain scale), First Dose: 03/25/19 15:19:00 EDT'. At the bottom, there are buttons for 'Done', 'Not Done', and 'Document'.

Activities and Interventions:

The screenshot shows the 'Activities and Interventions' section. A table titled 'Scheduled Patient Care' is visible. The table has columns for 'Task Status', 'Scheduled Date and Time', 'Task Description', and 'Order Details'. The data rows are:

| Task Status | Scheduled Date and Time | Task Description | Order Details |
|-------------|-------------------------|--|---------------|
| Overdue | 3/28/2019 12:17 EDT | Patient Isolation | |
| Pending | 3/29/2019 13:42 EDT | MRI Screening Form 03/29/19 13:42:00 EDT, Routine, Reason: Abdominal aortic aneurysm (AAA), k... | |

ED Tracking Board:

| Room | Age | Name | Sex | Vitals | Diagnosis | Score | Other |
|------|----------|--------------------|-----|---------|------------------|-------|-------|
| 02.A | 24 years | ZZTEST, ALEX | M | 5493.36 | 1:Fever | 5 | ... |
| 03.A | 56 years | ZZTEST, DIANGELO | M | 59.08 | | 2 | ... |
| 04.A | 39 years | BREAKAWAY, MICHAEL | M | 2856.34 | | 2 | ... |
| 05.A | 38 years | BREAKAWAY, LILY | F | 431.49 | 1:Abdominal pain | 2 | ... |
| 06.A | | | | | | | ... |

When the task is selected to be documented on it will open the MRI Screening PowerForm to be completed by the nursing staff & will then be available for review by MRI staff performing the exam.

Additionally, a case is being worked on to add this form into the Ad Hoc folder where it will be easily located by nursing staff (e.g. Assessments folder, ED Forms, etc.) and should be completed soon.
