CareCompass Alerts for Unit Assistive Personnel

CareCompass alerts will be decreasing for Assistive Personnel (UA, UC, NA). Most new orders will still trigger alerts. You will no longer see alerts for lab results, medications, or orders that are designed solely to place charges. In the example below, you can see there are 68 alerts, but only 13 of them are orders, meaning only 13 of them are relevant to roles who do not address or treat abnormal lab values.

68	
Results	Orders
17	3
12	3
11	--
14	2
1	5

This is an effort to make the CareCompass alert function more useful to you and to increase its efficiency and meaningfulness.
