Mpage Upgrade 6.9 Abbreviated Release notes

1. Many of the components have been upgraded to be more consistent visually. Components touched include:
   a. Actions and Situational Awareness
   b. Allergies
   c. Care Team
   d. Diagram
   e. Documents
   f. Histories
      i. Family tab
      ii. Pregnancy tab
      iii. Problems tab
      iv. Procedures tab
      v. Social tab
   g. Immunizations
   h. New Order Entry
   i. Ophthalmology Workflow components
   j. Patient Education
   k. Problem List

2. Allergies component defaults appropriate category when adding allergies from the MPage

3. Documents component
   a. Now allows for opening documents in modify mode to allow authors to make changes to documents from the MPage level.
   b. The last 50 notes filter can be removed with one click, thus displaying all notes within the defined timeframe. The last 50 notes filter will default to selected to ensure optimal performance.

4. New Order Entry component
   a. Entering text in the search field automatically populates the component with the top 60 results. Pagination supports accessing additional results.
   b. Single click an order to add it to the Orders for Signature dialog box. Click the order again to remove it from the Orders for Signature dialog box.

5. Patient Education component - searching for education materials and medication leaflets is now accessed from the 'More Options' button in the updated design of the Workflow Patient Education component.

6. Problem Component has the following enhancement
   a. A 'Hierarchical Condition Category' (HCC) indicator now precedes the problem name.
   b. A separate, expandable section displays all previous This Visit problems.
   c. Search results wrap to accommodate long problem names.
