**08/24/2018**

Update: Oxygen Protocol/Oxygen Therapy orders

The Oxygen Protocol order is being inactivated, providers are encouraged to order Oxygen Therapy and chose an existing order sentence with titration parameters based on SpO2 values or specify parameters as displayed in the screen shot below. When ordered, Oxygen Therapy will task Respiratory Therapy to check your patient's oxygen needs every shift.

Oxygen Therapy will replace Oxygen Protocol on all PowerPlans that contain the Oxygen Protocol order. Providers will need to select one of the titration-based order sentences listed above since no order sentence is configured as a PowerPlan default. The order will appear in the Respiratory section of the PowerPlan as displayed below:
