Update to Resuscitation Status (Code Status) Order

Duplicate checking parameters are now configured to alert providers of an existing Resuscitation Status (Code Status) order. If an active Resuscitation Status (Code Status) order exists for the current patient encounter, the provider will receive the Duplicate Order Alert displayed below. Providers will need to select which order to remove to continue the order entry process. This change will ensure that patients have one active Resuscitation Status (Code Status) order during their patient stay.
