

ATRIAL FIBRILLATION (AFIB) CLINIC

The Atrial Fibrillation Clinic offers the most advanced treatment approaches through a specially trained, multidisciplinary team. Since Atrial Fibrillation can affect each patient differently, our treatment approaches are tailored to specific patient needs.

The Atrial Fibrillation Clinic has expertise in offering treatment which may include anti-arrhythmic medication and ablations. According to multiple studies published in New England Journal of Medicine it is recommend that ablation strategy be used early in the treatment for better patient outcomes.

ATRIAL FIBRILLATION CLINIC PATIENTS INCLUDE:

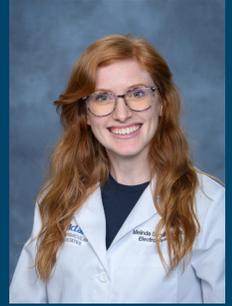

- All patients with newly diagnosed atrial fibrillation.
- Atrial Fibrillation in patients with heart failure.
- Drug Refractory Atrial Fibrillation.
- Patients looking for second opinion.

Refer your patients to the Atrial Fibrillation Clinic through Cerner or call the office for more information.

The multidisciplinary team at our Atrial Fibrillation Clinic helps to coordinate treatment and follow-up care. The team includes an electrophysiologist (a physician who specializes in treating heart arrhythmias), nurse practitioner, and electrophysiology nurse. The clinic also provides education to the patient and the family.
