

Meet McLaren

BONE MARROW BIOPSY CLINIC

The Bone Marrow Biopsy Clinic at Karmanos Cancer Institute at McLaren Greater Lansing offers a multi-disciplinary collaboration where the latest value care studies, outcomes and research come together for patients with unexplained cytopenia requiring further work-up and for patients with Monoclonal Gammopathies of Uncertain Significance (MGUS) in a convenient outpatient setting.

Patients will receive an examination and further evaluation, and if and when appropriate, a bone marrow study will be performed to collect and examine bone marrow.

CONDITIONS:

- Chronic cytopenia (including anemia, thrombocytopenia, and leukopenia)
- Monoclonal gammopathy
- Hematolymphoid disorders
- Other indications that are appropriate for a bone marrow study

INTERVENTIONAL RADIOLOGY:

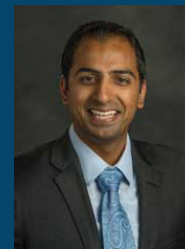

Interventional radiology is available for patients who have a large body habitus, those requiring sedation, and those who have had a prior unsuccessful biopsy.
