McLaren Greater Lansing and MSU Health Care have partnered to bring a state-of-the-art breast imaging center to the greater Lansing community, located at McLaren’s hospital campus. The Breast Imaging Center brings a comprehensive approach to diagnosing breast cancer and streamlining treatment pathways, all in a comforting environment for patients.

At the Breast Imaging Center, patients have convenient access to the latest advances in breast imaging technologies with reports that are generated within 24 hours. Those who require breast biopsies are able to schedule within a week of their diagnostic imaging results.

The Breast Imaging Center is designated as a Breast Imaging Center of Excellence by the American College of Radiology (ACR). In addition to the mandatory mammography accreditation program, the Breast Imaging Center is also accredited in all voluntary breast-imaging programs and modules.

SERVICES INCLUDE:
- Four 2D/3D mammography systems
- Bone density testing
- Ultrasound units with elastography for breast exams
- Ultrasound-guided biopsy
- Pre-surgical breast localization
- Stereotactic core biopsy
- Two breast biopsy systems, including prone and upright

RESEARCH:
MSU scientists at Precision Health Program and the Department of Radiology are leading a cutting-edge translational research project for primary prevention of breast cancer. The research team in cancer modeling, fabrication of nanoparticle-based contrast agents and interventional radiology are being applied to develop an image-guided intraductal delivery procedure for epithelial cell ablation.

This innovative procedure could provide a local less-invasive alternative intervention to prophylactic mastectomy for high-risk individuals in the near future. For more information, call MSU Radiology Department at (517) 335-0120.

Date of last Clinical Breast Exam (CBE) ___________ (illustrate findings below)

PREPARATIONS

Breast Imaging

- Do NOT wear deodorant, powder, or lotion to your appointment.

- Bring ALL previous mammography/breast ultrasound images performed at other facilities to your appointment.

Biopsy/Aspiration

- Discontinue blood thinning and/or non-steroidal anti-inflammatory medications 7 days prior.

Additional breast imaging and/or a biopsy may be performed if deemed necessary by the radiologist unless the following box is checked: ☐

For palpable lumps, ultrasound should also be scheduled.

If patient is under 30 years old, initial exam should be an ultrasound.

Diagnostic mammogram should be ordered for a new lump.
