## Meet McLaren

# ELECTROPHYSIOLOGY

The electrophysiology (EP) program at the McLaren Greater Lansing Heart and Vascular Institute offers a wide range of EP services for your patients, including various ablations and device implantations. Led by Dr. Khalil Kanjwal, the EP lab performs zero fluoro ablations for AFib patients using ultrasound, which incorporates sound waves instead of radiation to create images of the heart.

### DEVICE IMPLEMENTATIONS

- Pacemakers
- Leadless pacemakers
- Bi-ventricular pacemakers
- Defibrillators
- Bi-ventricular Defibrillators
- Loop recorders
- Subcutaneous ICD
- His bundle pacing (HBP)

### ELECTROPHYSIOLOGICAL STUDIES AND ABLATIONS

- Atrial fibrillation ablations
- SVT ablations
- PVC ablations
- Ventricular tachycardia ablations
- AV node ablations

### CCM® THERAPY DELIVERED BY THE OPTIMIZER® SYSTEM

The Optimizer® Smart System delivers Cardiac Contractility Modulation (CCM®) therapy, a new therapeutic approach that improves quality of life for patients that are no longer responding to heart failure medications.

CCM® therapy delivers precisely timed electrical pulses to the heart during the absolute refractory period of the beating cycle. Unlike pacemakers or defibrillator, CCM® therapy is designed to cause subsequent beats of the heart to be stronger and more forceful, resulting in more oxygen rich blood to be delivered to the body with each beat. Contact our office to see if your patient might be a candidate for this therapy.

## HOW TO REFER:

To refer a patient, please fax a referral form to (517) 483-4861. Referral forms can be found at [mclaren.org/careconnect](http://mclaren.org/careconnect).

For offices with access to Cerner, please send a referral through Cerner.
