

ROBOTIC-ASSISTED SURGERY

Meet McLaren

At McLaren, the most compassionate surgeons perform the most complex surgeries utilizing a robot surgical system. Surgeons now have broader capabilities and can use the system to perform a wide spectrum of minimally-invasive surgical procedures.

Robotic-assisted procedures are used to treat many conditions, which include, but are not limited to:

- Colorectal procedures
- General procedures such as gall bladder removal and hernia repair
- Gynecology procedures such as hysterectomy, ovarian cystectomy, and endometriosis resection
- Orthopedic procedures
- Urology procedures such as prostatectomy and nephrectomy
- And many more

ADVANTAGES FOR PATIENTS:

- Shorter hospital stays
- Less pain
- Less risk for infection
- Faster recovery
- Less scarring
- Reduced blood loss and transfusions
- Speedier return to daily activities
