#### Disaster Charting: Inpatient Nursing Staff

During the Covid-19 patient influx ONE McLaren has adopted a documentation reduction strategy for inpatient nursing. This reduction strategy applies to all acute patients, excluding Women's Health and Emergency Department. Updates will be made live December 16th for disaster charting, including some acceptable reductions in regulatory requirement charting.

- Braden and Morse will only be required and tasked once per 24 hours.
- Required documentation of Interdisciplinary Plans of Care will be temporarily suspended so the Care Plan reminder task will be suppressed.
- A new Disaster Charting iView band will be added into iView. This band can replace quick view and systems assessment band charting in most instances. Charting by exception is encouraged.
- Restraints, lines, tubes and drains, medication administration and blood transfusion documentation requirements will remain the same.
- A nursing narrative note should be used for documentation of major events.

The iView Disaster Charting band includes most common sections charted on most patients. There is a Major Body Systems section that allows for charting within desired limits or with exceptions.

🗙 Dis	saster Charting								
1	VITAL SIGNS	~	Find Item V Critical	🗌 High	Low		bnormal	Unauth	🗌 Flag
	Pain Assessment	1							
	Measurements		Result	Commen	ts Fla	ag (	Date		Performe

	IV Drips	- 1	⊿ Major Body Systems						
	Major Body Systems	- 1	Neurological Systems Assessment			Withir	n Desire		
	NEUROLOGICAL	- 1	Respiratory Systems Assessment			Uncha	inged Ex		
	Mental Status/Cognition	- 1	Cardiovascular Systems Assessment			Cardio	ovascular S	ystems Assess	iment 🗙
	Pupils Assessment	- 1	Gastrointestinal Systems Assessmer	nt		Withir	n Desired l	Limits (WDL)	
	Neuromuscular/Extremities Assessment	- 1	Genitourinary Systems Assessment			WDL E	Except		
	Glasgow Coma Assessment	~	Characteristics of Comprehension			Uncha	anged		
≪ Ad	ult Lines - Devices		Integumentary Systems Assessment			Uncha	anged Exce	ept	
	ake And Output		Psychosocial System Assessment						

These fields are also available in their corresponding usual charting sections. Any exceptions should be documented in detail. Each of these new fields also has reference text (click on the blue text to launch) with descriptions of what is considered "within desired limits".

## CERNER FLASH

For example, if documenting a Neurological Systems Assessment as "WDL except"; continue through the assessment fields to document the exceptions. If abnormalities are assessed which deviate from "WDL"; document a complete assessment for that body system, as per usual routine.

	Major Body Systems				
	NEUROLOGICAL	Neurological Systems Assessment	WDL Except		
	Mental Status/Cognition	Neurological Symptoms	Dizziness Receptive Ian		
	Pupils Assessment	Characteristics of Communication			
	Neuromuscular/Extremities Assessment	Characteristics of Speech			
		Characteristics of Verbal Expression			
1	RESPIRATORY	Characteristics of Comprehension			
Breath Sounds Assess	Breath Sounds Assessment	Aspiration Risk			
	Chest Tubes	Facial Symmetry			
Aisury Management		Bispectral Index (BIS)			

<u>To view the Disaster Charting band</u>, you may need to reset or customize your iView bands. To do this: Open a chart and navigate to Interactive View and I&O. From the menu, select View, then layout.

- Selecting "Reset Navigator Bands" will return the bands to the default setting for your current nurse position and will now include Disaster Charting.
- Selecting "Navigator Bands" will keep any customizations you have already applied and allow you to manually add the Disaster Charting band.
