Ambulatory and Inpatient: New COVID Vaccine Smart Template   **December 20, 2022**

COVID Vaccine Smart Template Overview

Enhancement: <mark>Effective 12/27/22,</mark> there is a new COVID Vaccine Smart Template embedded within the ID Risk Screen and COVID Infection Risk Screening tabs of the Intake Form. This smart template will automatically pull in the patient's COVID vaccine information as long as there is existing vaccine documentation in the chart (by MCIR Import or manually charting). This will save time during the intake process since this information will no longer need to be manually entered within the Intake Form.
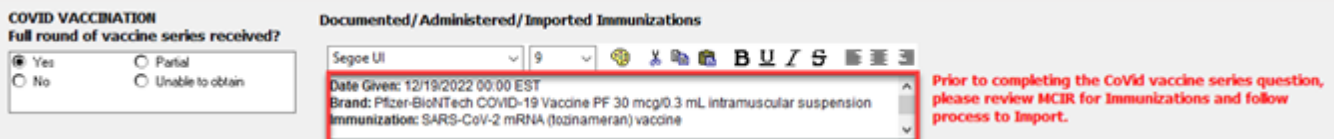

Workflow Considerations: Since this form relies on MCIR importing/Immunization history, it is best practice to import/document immunizations into the patient's chart first, and then proceed with documenting the Intake Form.

Prior to Enhancement: Users had to free text the date and type of COVID vaccine given.

After Enhancement: The patient's COVID Vaccine information will automatically pull into the form (when existing documentation is present in the patient's chart).

- The scroll bar on the right side of the field can be used to see additional information if needed.

Position Impacted: All Clinical Staff

Please refer to page 2 for additional information and the full list of forms/sections impacted.

COVID Smart Template within the Intake Form

1) When documenting COVID history within the **ID Risk Screen** or **COVID Infection Risk Screening** tab of the Intake Form, the patient's historical COVID vaccine administrations will automatically pull into the **Documented/Administered/Imported Immunizations** field. The information that displays includes:

- Date Given
- Brand
- Immunization
- Imported On (date imported from MCIR if applicable)

- ***Note:*** *The historical COVID vaccine information must be documented or imported from MCIR prior to opening the intake form for the information to automatically pull in. If COVID vaccines were previously imported or documented, this will pull forward each time the Intake Form is used.*

Intake Forms Impacted

Form Name	Section/Tab
Admission History Adult	ID Risk Screen
Admission History Pediatric	ID Risk Screen
Antepartum Intake	ID Risk Screen
Ambulatory Comprehensive Intake	ID Risk Screen
Ambulatory Quick Intake Amb	ID Risk Screen
