Ambulatory Provider - New Discern Alert for Dx on Vaccines Friday, Dec 18, 2020

Workflow Changes Overview

Overview of Change: Effective 12/23/2020, providers will receive a Discern Alert on vaccine orders if the incorrect diagnosis is chosen. Alert will prompt provider to search for and choose an appropriate diagnosis.

Positions Impacted: All Ambulatory Provider positions placing vaccine orders.

Discern Update #1:

A Discern Alert will prompt if provider does not associate a Z23 diagnosis to certain vaccine orders such as:

Influenza	Pneumococcal	Meningococcal	MMR
Palivizumab	Polio	Rotavirus	Typhoid
Varicella	Yellow Fever	Zoster	Haemophilus
Hepatitis A	Hepatitis B	Hepatitis A-B	HPV
Japanese Enceph			

Update for Discern #2 (NEW UPDATE EFFECTIVE 12/28/2020):

A Discern Alert will prompt if provider associates a Z23 diagnosis to one of the below vaccine orders. The alert will prompt user with two options to choose from; is vaccine routine or is vaccine a result of an injury. If vaccine is result of an injury, provider will be directed to choose the appropriate injury diagnosis.

Diphth/tetanus/pertussis/polio/ haemophilus	Diphtheria/tetanus/pertussis (DTaP) ped	Diphtheria/tetanus/pertussis,acel/ hepB/polio
Diphtheria/tetanus/pertussis,acel/polio	Tetanus/diphth/pertuss (Tdap) adult/adol	Tetanus-diphth toxoids (Td) adult/adol
Tetanus-diphth toxoids (Td) adult/adol	Rabies	PPD

Discern Scenario 1 – Provider Does Not Associate Z23 Diagnosis to Vaccine

This this example, the provider orders a routine vaccine and does not use a Z23 diagnosis.

• **Note:** If multiple diagnoses are chosen for this order (even if Z23 is primary), the alert will still prompt. Only one diagnosis can be associated, and it must be a Z23.

1.) Provider places order and attempts to sign it.	Discern: (1 of 1)

Discern Scenario 2 – Provider Associates a Z23 Diagnosis to a Vaccine that Could be a Result of an Injury.

In this example, the provider orders a vaccine and uses a Z23 diagnosis. Since these vaccines can be given as routine or as a result of an injury, an alert will prompt requiring provider to choose which option. If the vaccine is being given as a result of an injury, provider will need to choose correct injury diagnosis.

 Provider places vaccine order with a Z23 diagnosis and attempts to sign it. Discern Alert prompts, indicating to choose one of the following options: a. Given as Route Vaccination b. Given as Result of Injury If Routine is selected, no further action is needed, and the order is signed after clicking OK. If Result of Injury is selected, the provider is taken back to the orders window after clicking OK 	Discem: (1 of 1) Cerner STOP!!! If Tetanus is administered as a result of injury, use diagnosis code for injury to support medical necessity. Alert Action: Given as Routine Vaccination Given as Result of Injury OK
