

Upcoming Changes to Moderate Sedation iView Documentation

In order to properly charge for Moderate Sedation, there must be a Start, Stop and Total time documented in iView. Some updates will soon be implemented to make this documentation clearer and to improve the workflow. The blue reference text for all 3 fields has been updated to promote clarity as well.

The previous field **Sedation Agent Administration Time** has been updated to help clarify what is expected:

Old

Procedure Sedation Monitoring	
Sedation Monitoring Phase	
Procedure Start Time	
Sedation Agent Administration Time	
SBP/DBP Cuff	mmHg
Mean Arterial Pressure, Cuff	mmHg

New

Procedure Sedation Monitoring	
Sedation Monitoring Phase	
Procedure Start Time	
Sedation Start Time (FIRST dose only)	
SBP/DBP Cuff	mmHg
Mean Arterial Pressure, Cuff	mmHg

This field has also been added as a “shared field” into the Post Sedation Monitoring section. This means if you documented it in the first section, the results will pull in here. If you found you forgot to document it at the start of the procedure, you can easily document it in Post Procedure. You should only document this ONCE in either section.

<ul style="list-style-type: none"> Procedure Sedation Med Admin <ul style="list-style-type: none"> Pre-sedation System Assessment Pre-procedure Time-Out Procedure Sedation Monitoring Post Sedation Monitoring Pain Tools Adult Modified Aldrete 	<ul style="list-style-type: none"> Post Sedation Monitoring <ul style="list-style-type: none"> Sedation Monitoring Phase Procedure Stop Time Procedure Performed Sedation Start Time (FIRST dose only) Sedation Stop Time
---	--

Additionally, the Sedation Total Time field now operates on conditional logic. This means when documentation is entered in the Sedation Stop Time field, the Total Time will open automatically and calculate the total time without any additional clicks.

Post Sedation Monitoring	
Sedation Monitoring Phase	
Procedure Stop Time	
Procedure Performed	
Sedation Start Time (FIRST dose only)	8/21/2019 08:35
Sedation Stop Time	8/21/2019 0...
Sedation Total Time	minutes 16
SBP/DBP Cuff	mmHg

As previously, the Sedation Total Time will not calculate unless BOTH a Sedation Start and a Sedation Stop time have been documented.

CERNER FLASH

Definitions and reference text:

If any iView field contains reference information, it will display blue in color. You can hover over this blue text to view more detail and click the Reference Text link embedded:

OR you can simply click the blue iView field and the reference information will pop-up. Below is the reference data/definition for the **Sedation Start Time (FIRST dose only)** field:

Sedation Agent Administration Time

Reference

Sedation Agent Administration Time

CarePlan information Chart guide Nurse preparation Patient education

This is the time that the **FIRST** sedation agent is initially administered to the patient.

Sedation Stop Time:

Sedation Stop Time

Reference

Sedation Stop Time

CarePlan information Chart guide Nurse preparation Patient education

This is when the physician has ended the procedure/left the room.

Sedation Total Time:

Sedation Total Time

Reference

Sedation Total Time

CarePlan information Chart guide Nurse preparation Patient education

This is the total time between the **FIRST** sedation agent and the procedure ending.
