Title	Date	Speaker(s)
<p>Improving the Relationship Between the Researcher & IRB</p> <p>Sometimes the relationship between the researchers and IRB can appear to be strained. Cultivation of a successful relationship between the IRB and the researchers requires communication and effort from both parties. This is the chance for researchers and their staff to ask the IRB questions regarding their time lines and processes. The IRB analyst will provide the top reasons for delay in IRB approval and ways to mitigate delays.</p>	February 9	Patricia Ivery Mary O'Connor Jodi Reetz
<p>Use of Electronic Informed Consent in Research</p> <p>This session will discuss the regulations, benefits, and challenges related to electronic consent and technologies to improve the research process. Discussion will also include the introduction of eConsenting at McLaren Health Care.</p>	April 12	Patricia Ivery Brenda Buckle
<p>Incidental Findings During Research</p> <p>An issue of increasing importance in human participant research is that of “incidental findings.” Incidental findings have been defined as observations of potential clinical significance unexpectedly discovered in research participants and unrelated to the purpose or variables of the study.</p>	June 14	Patricia Ivery
<p>Challenges, Strategies and Tools for Patient Recruitment</p> <p>Subject recruitment continues to be one of the most challenging components of clinical trial execution. This webinar will provide a comprehensive review of the subject recruitment planning process, challenges with recruitment in complex studies, strategies, and recruitment tools to increase enrollment.</p>	August 9	Brenda Buckle Liz Bowie
<p>What is Genetic Research all About?</p> <p>This session will review the basics of genetics, different types of genetic research, and how genetic research can contribute to the outcomes of health and healthcare. Identification of risks associated with genetic information</p>	October 11	Patricia Ivery
